

# Brochure Project

**Directions:** This project will be completed in Microsoft Publisher. You will obviously need to choose the brochure selection when you first open up Publisher. It is best to select a design template, but you may also choose a blank one and start from scratch.

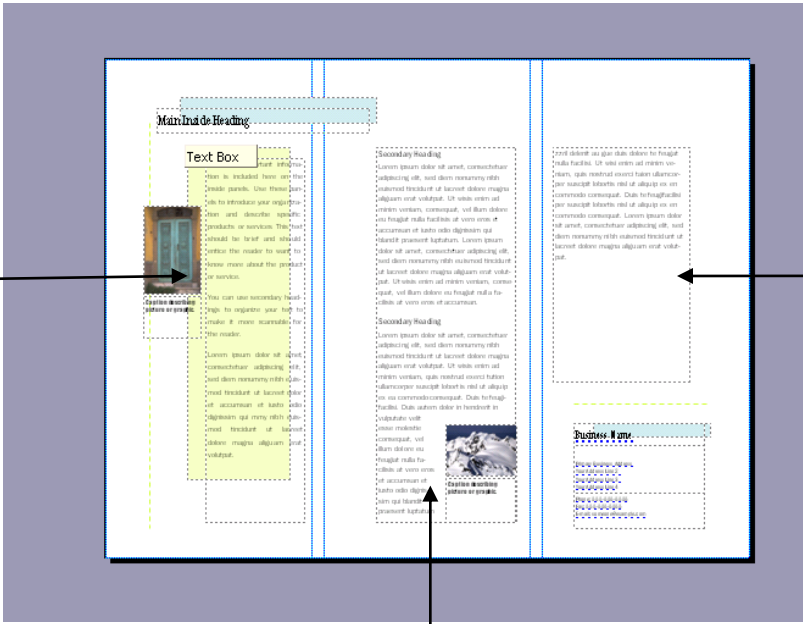

Your brochure will be about a technology-based product (something fairly new to the market). Your brochure will be folded into three sections so you will essentially have six pages or sections to work with. Here is the layout of how you should put your brochure together:

**Inside Left**

Information about your product.

- What comes with it?
- Are there different varieties?
- What are the main features?
- Why would someone want to buy this?
- How does it compare to other brands?

**Inside Right**

- List the price
- Where is it available?
- How can you order it?

**Inside Middle**  
(Same as Inside left)

**Ideas for Delegating Work:**

- 1) One person can start the design on the first page
- 2) The other can start designing the back page (it will print on two pages anyway)
- 3) One person can look up information
- 4) You may make a folder on Common drive under "Minger Folder" if you would like to save pictures and other info.
- 5) Be creative and have FUN!!!
