

Excel Assignment #5 "Survey"

Directions: You need to think of a question that you can ask your classmates where you would get various responses. An example of a question might be, "Who is your favorite NFL team?" You do not want your question to be too open to where you would get a different response from each student. You want some of the same responses. You also want to note if the student was male or female. Once you get the information, follow the steps and the example below to finish the assignment.

1. Place your data into an organized chart.

Student	Male/Female	Favorite Team
1	M	Cubs
2	F	Cards
3	M	Cubs
4	M	Cards
5	M	Cards
6	F	Cards
7	F	Cards
8	M	Cubs
9	F	White Sox
10	M	Cards
11	F	Rays
12	F	Cubs

2. Use this data to make another chart that will make the numbers easier to analyze.

	Cubs	Cards	White Sox	Rays	Totals
Overall	4	6	1	1	12
Male	3	3	0	0	6
Female	1	3	1	1	6

3. Now you need to make a bar graph showing the different responses for the total (boys and girls), male, and female. Select all the information in the table you made like the one above. You will then go to "insert" and find the correct grap

4. Put on a header, save as "Excel #5", and hand in. Your finished product should look something like below:
